VEDICSIDDHANTA · CENTRE FOR SCIENTIFIC RESEARCH ON VEDIC SCIENCE

How to Read the Stock Market & Economic Analysis Observatory

अर्थ एवं बाज़ार ज्योतिष — a step-by-step guide for prediction and analysis

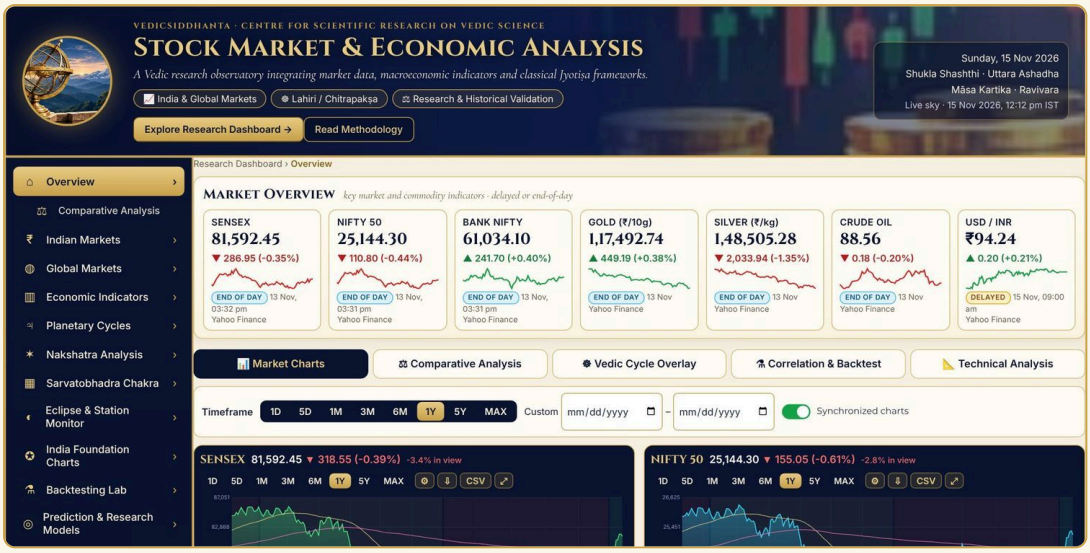

Sensex · Nifty 50 · Bank Nifty · Gold · Silver · world markets — price charts with planetary layers, bull and bear cycles of Jupiter, Saturn and Rāhu, nakshatra and tithi statistics, Sarvatobhadra vedha, eclipses and stations, the foundation charts of India, the Sensex and the Nifty, a backtesting laboratory and weekly, monthly and yearly forecasts.

0 · The page at a glance and the 8-step routine
1 · Market tiles and data badges
2 · Price charts and the ⚙ layers
3 · Comparative analysis
4 · Indian, sectoral and global markets
5 · The Jyotiṣa reading — score, volatility, why
6 · Price & Planetary Cycles chart
7 · Planetary cycle event studies
8 · Nakshatra and tithi analysis
9 · Sarvatobhadra, eclipses and stations
10 · India foundation charts
11 · The Backtesting Laboratory
12 · The seven prediction & research models
13 · Weekly, monthly and yearly forecasts
14 · A worked analysis and a template
15 · Reports, settings, glossary, limits

Live tool: **vedicsiddhanta.in/stock-market-astrology** · Screens captured 15 November 2026 (plugin v4.0) · Narrated video on the same page · For research and education only — not investment advice.

0 The Page at a Glance

The observatory puts real market data and the classical Medinī Jyotiṣa reading side by side — and then tests the reading against history, so you always know how much weight a signal deserves.

Header, research-dashboard menu (left), live tiles, timeframe bar and the synchronized charts.

The thirteen modules

MODULE	USE IT TO…
Overview (+ Comparative)	See prices and the four main charts; compare markets
Indian / Global Markets	Sectors, kāraka, world indices, correlation
Economic Indicators	Official sources (data sync in phase 2)
Planetary Cycles	Event studies, return by sign, 12-month outlook
Nakshatra Analysis	Moon now; history by nakshatra and tithi
Sarvatobhadra Chakra	Vedha on each instrument's nakshatras
Eclipse & Station Monitor	Turning-point dates ahead and in the past
India Foundation Charts	India 1947, Sensex, Nifty: transits and daśā
Backtesting Lab	Test any of 19 planetary events on real prices
Prediction & Research Models	Seven models incl. weekly / monthly / yearly forecasts
Reports / Methodology	Exports, report, ayanāṃśa and settings

Each module has its own address (e.g. **#lab**, **#models**) — bookmark or share it. On a phone, open the menu with "☰ Research Dashboard".

The 8-step routine

1. **Tiles** — price, change, and is the data delayed or end-of-day?
2. **Charts** — trend, moving averages, and the planetary layers.
3. **Score, volatility, why** — the classical reading and its reasons.
4. **Cycle** — which Jupiter / Saturn / Rāhu spell are we in?
5. **Foundation charts** — India, Sensex, Nifty: supportive or stressed?
6. **Dates** — mark eclipses, stations and sign changes.
7. **Test** — run the rule in the Backtesting Lab before trusting it.
8. **Forecast** — read weekly / monthly / yearly, honest about limits.

Two kinds of output. Every model carries a tag: Statistical (measured on prices), Jyotiṣa (classical rules as written in the articles) or both, shown separately. They are never added together.

1 Market Tiles and Data Badges

Seven tiles: Sensex, Nifty 50, Bank Nifty, Gold ₹/10 g, Silver ₹/kg, Crude oil, USD/INR.

Reading a tile

- **Big number** — last price.
- **▲ / ▼** — change from the previous close, in points and %.
- **Line** — the last month.
- **Time and source** — when the price was taken, and from where.
- Click a tile to open that market's chart.

Badges

BADGE	MEANING
Delayed	Intraday price, about 15 minutes old
End of day	Last official close (market shut or holiday)
Built-in	Live feed unavailable — history stored in the plugin is shown

Gold and silver in rupees

Gold ₹/10 g = COMEX gold ($/oz) × USD/INR × 10 ÷ 31.1035
Silver ₹/kg = COMEX silver ($/oz) × USD/INR × 1000 ÷ 31.1035

These are **international parity** prices. They exclude import duty and GST, so they read lower than the MCX or jeweller's rate. Use them for trend and comparison, not for a buying price.

Data refresh

Prices come through this site's server from Yahoo Finance (unofficial), cached for 10 minutes intraday and 6 hours for daily history. Planetary positions are computed in your browser by the VedicSiddhanta engine (Lahiri by default).

2 Price Charts and the ⚙ Layers

The ⚙ menu: indicators and planetary layers.

Hover / tap: price, MAs, planets and Moon nakshatra for that day.

CONTROL / LAYER	HOW TO READ IT
Timeframe 1D … MAX	Each chart has its own chips. With **Synchronized charts** on, the toolbar timeframe or custom dates move all four charts together.
MA 50 / MA 200	Price above a rising 200-day average = long uptrend. 50 crossing 200 = trend change (golden / death cross).
Bollinger bands	20-day average ± 2 standard deviations. Narrow bands often precede a big move.
RSI 14	Above 70 overbought, below 30 oversold — momentum, not direction.
MACD	Line crossing its signal = momentum shift; the histogram shows its strength.
Volume	Big moves on big volume carry more conviction.
Planetary transits	Lanes for ♃ Jupiter, ♄ Saturn, ☊ Rāhu by sign class: **green bull**, **blue steady**, **yellow volatile**, **red bear**; ᴿ / faded = vakrī. Background tint follows Jupiter.
Nakshatra	A band showing the Moon's nakshatra each day.
Eclipses / Stations	Markers on eclipse dates and on the days a planet turns retrograde or direct.
⇩ PNG · CSV · ⤢	Download the picture or the data; full screen (Esc to close).

Tip. Turn on the planetary lanes on a 5Y or MAX chart and ask: did the big falls (2008, 2020) or rallies line up with any lane change? Then test that idea in the Backtesting Lab (section 11).

3 Comparative Analysis

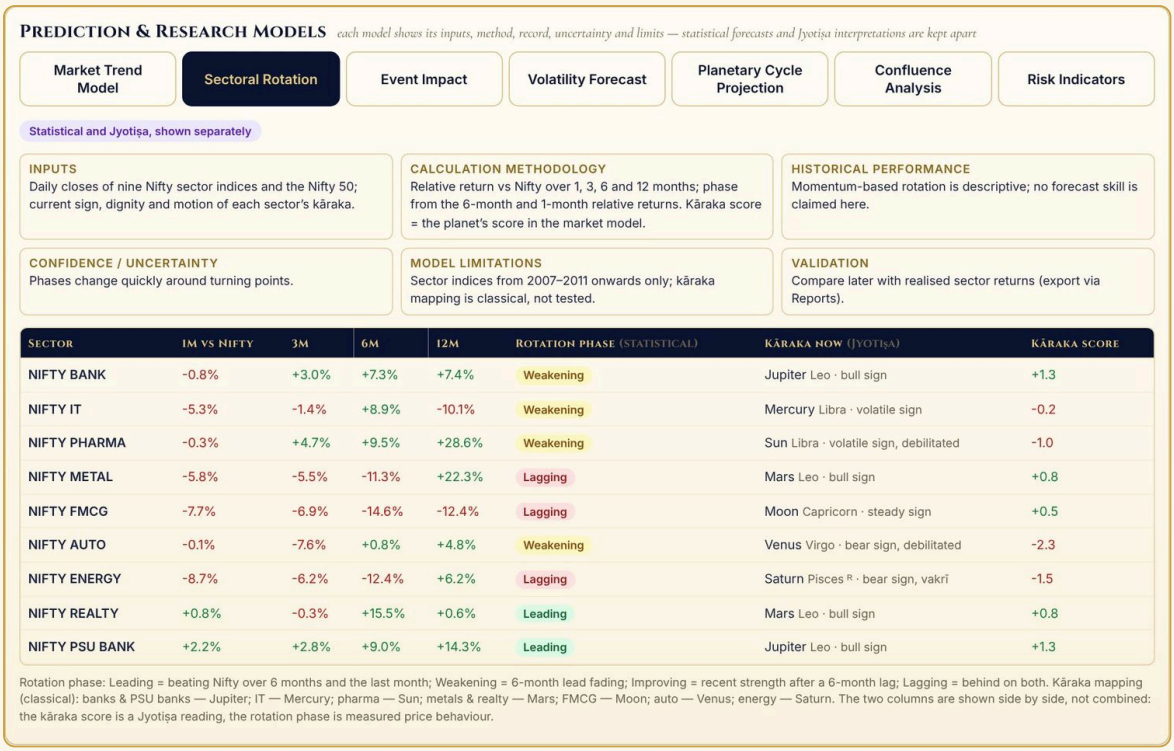

Different price units are never compared directly — every market is rebased to 0 % at the start of the period.

Overview → Comparative Analysis: instruments, period, quick pairs, normalized chart and statistics.

STATISTIC	MEANING	READ IT AS…
Return / CAGR	Total change over the period / yearly compounded growth	Which market did better
Volatility (annual)	Standard deviation of daily returns × √252	How bumpy the ride was
Max drawdown	Worst fall from a peak in the period	The pain you would have sat through
Correlation	−1 … +1, on daily returns	Above 0.7 = move together; near 0 = independent (diversifies)
Beta of A on B	How much A moves for a 1 % move in B	> 1 = A amplifies B
Relative performance	A ÷ B rebased	Rising line = A outperforming
Gold / silver ratio	Ounces of silver per ounce of gold	High ratio = silver cheap relative to gold

4 Indian, Sectoral and Global Markets

Prediction & Research Models *each model shows its inputs, method, record, uncertainty and limits — statistical forecasts and Jyotiṣa interpretations are kept apart*

Market Trend Model | **Sectoral Rotation** | Event Impact | Volatility Forecast | Planetary Cycle Projection | Confluence Analysis | Risk Indicators

Statistical and Jyotiṣa, shown separately

INPUTS
Daily closes of nine Nifty sector indices and the Nifty 50; current sign, dignity and motion of each sector's kāraka.

CALCULATION METHODOLOGY
Relative return vs Nifty over 1, 3, 6 and 12 months; phase from the 6-month and 1-month relative returns. Kāraka score = the planet's score in the market model.

HISTORICAL PERFORMANCE
Momentum-based rotation is descriptive; no forecast skill is claimed here.

CONFIDENCE / UNCERTAINTY
Phases change quickly around turning points.

MODEL LIMITATIONS
Sector indices from 2007–2011 onwards only; kāraka mapping is classical, not tested.

VALIDATION
Compare later with realised sector returns (export via Reports).

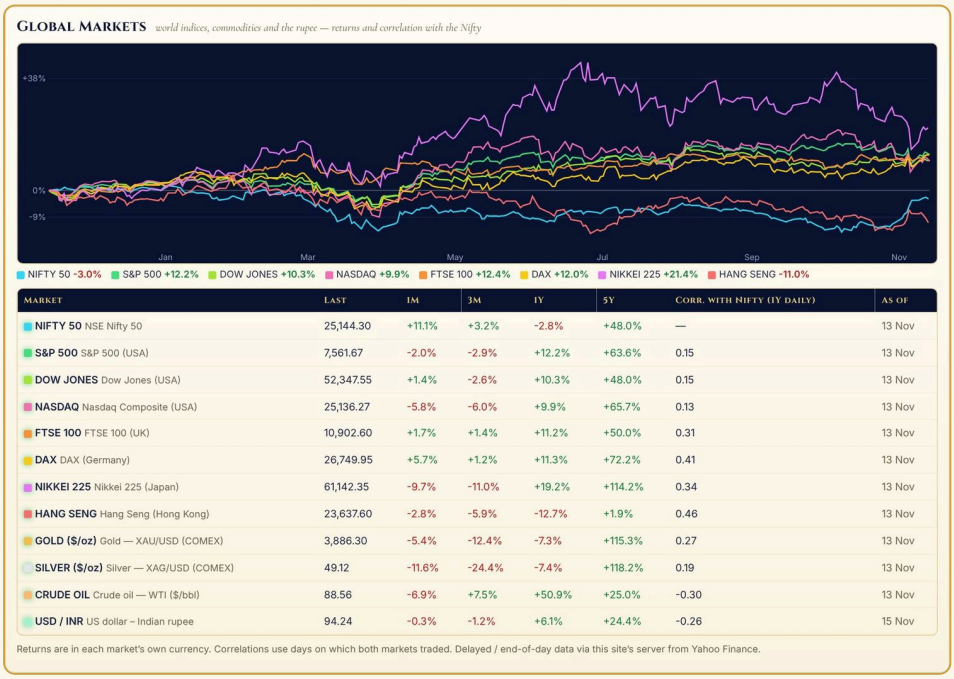

Sector	1M vs Nifty	3M	6M	12M	Rotation phase (statistical)	Kāraka now (Jyotiṣa)	Kāraka score
NIFTY BANK	-0.8%	+3.0%	+7.3%	+7.4%	Weakening	Jupiter Leo · bull sign	+1.3
NIFTY IT	-5.3%	-1.4%	+8.9%	-10.1%	Weakening	Mercury Libra · volatile sign	-0.2
NIFTY PHARMA	-0.3%	+4.7%	+9.5%	+28.6%	Weakening	Sun Libra · volatile sign, debilitated	-1.0
NIFTY METAL	-5.8%	-5.5%	-11.3%	+22.3%	Lagging	Mars Leo · bull sign	+0.8
NIFTY FMCG	-7.7%	-6.9%	-14.6%	-12.4%	Lagging	Moon Capricorn · steady sign	+0.5
NIFTY AUTO	-0.1%	-7.6%	+0.8%	+4.8%	Weakening	Venus Virgo · bear sign, debilitated	-2.3
NIFTY ENERGY	-8.7%	-6.2%	-12.4%	+6.2%	Lagging	Saturn Pisces ᴿ · bear sign, vakrī	-1.5
NIFTY REALTY	+0.8%	-0.3%	+15.5%	+0.6%	Leading	Mars Leo · bull sign	+0.8
NIFTY PSU BANK	+2.2%	+2.8%	+9.0%	+14.3%	Leading	Jupiter Leo · bull sign	+1.3

Rotation phase: Leading = beating Nifty over 6 months and the last month; Weakening = 6-month lead fading; Improving = recent strength after a 6-month lag; Lagging = behind on both. Kāraka mapping (classical): banks & PSU banks — Jupiter; IT — Mercury; pharma — Sun; metals & realty — Mars; FMCG — Moon; auto — Venus; energy — Saturn. The two columns are shown side by side, not combined: the kāraka score is a Jyotiṣa reading, the rotation phase is measured price behaviour.

Sectoral rotation (statistical) beside the classical kāraka (Jyotiṣa) — two separate columns.

Phase	Rule
Leading	Beating the Nifty over 6 months and the last month
Weakening	6-month lead, but fading recently
Improving	Recent strength after a 6-month lag
Lagging	Behind the Nifty on both

Sector	Classical kāraka
Banks, PSU banks	Jupiter
IT	Mercury
Pharma	Sun
Metal, Realty	Mars
FMCG	Moon
Auto	Venus
Energy	Saturn

Global Markets *world indices, commodities and the rupee — returns and correlation with the Nifty*

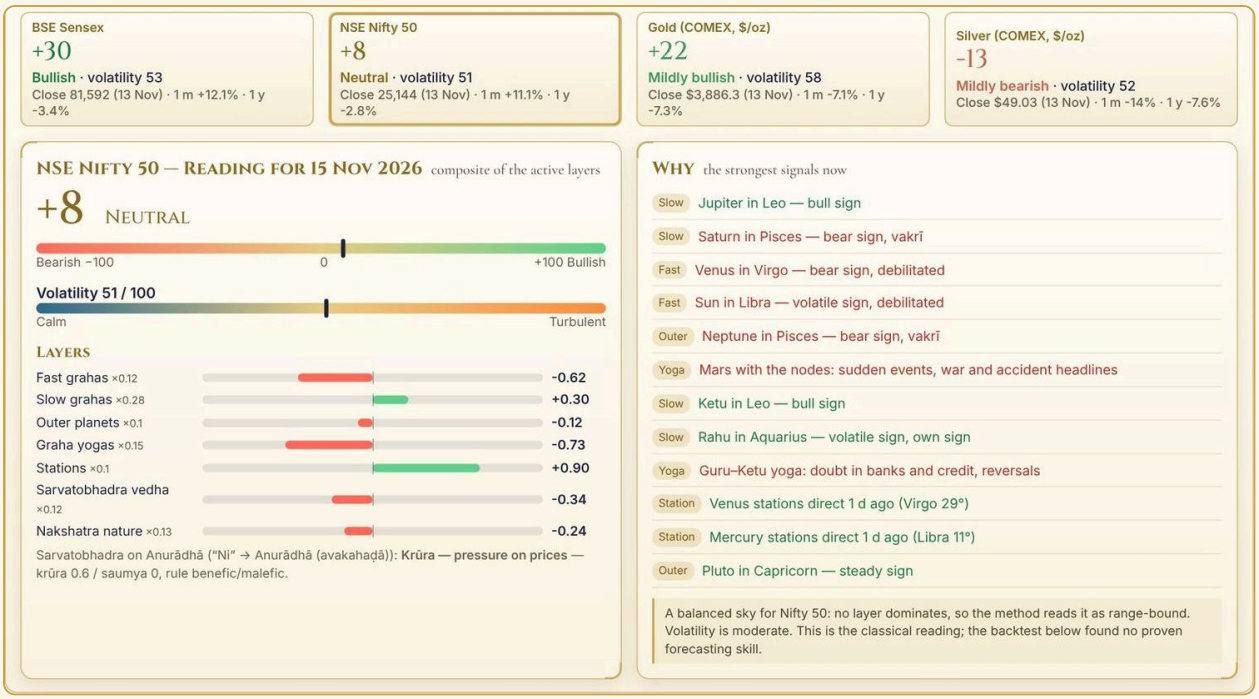

NIFTY 50 -3.0% · S&P 500 +12.2% · DOW JONES +10.3% · NASDAQ +9.9% · FTSE 100 +12.4% · DAX +12.0% · NIKKEI 225 +21.4% · HANG SENG -11.0%

Market	Last	1M	3M	1Y	5Y	Corr. with Nifty (1Y daily)	As of
NIFTY 50 NSE Nifty 50	25,144.30	+11.1%	+3.2%	-2.8%	+48.0%	—	13 Nov
S&P 500 S&P 500 (USA)	7,561.67	-2.0%	-2.9%	+12.2%	+63.6%	0.15	13 Nov
DOW JONES Dow Jones (USA)	52,347.55	+1.4%	-2.6%	+10.3%	+48.0%	0.15	13 Nov
NASDAQ Nasdaq Composite (USA)	25,136.27	-5.8%	-6.0%	+9.9%	+65.7%	0.13	13 Nov
FTSE 100 FTSE 100 (UK)	10,902.60	+1.7%	+1.4%	+11.2%	+50.0%	0.31	13 Nov
DAX DAX (Germany)	26,749.95	+5.7%	+1.2%	+11.3%	+72.2%	0.41	13 Nov
NIKKEI 225 Nikkei 225 (Japan)	61,142.35	-9.7%	-11.0%	+19.2%	+114.2%	0.34	13 Nov
HANG SENG Hang Seng (Hong Kong)	23,637.60	-2.8%	-5.9%	-12.7%	+1.9%	0.46	13 Nov
GOLD ($/oz) Gold — XAU/USD (COMEX)	3,886.30	-5.4%	-12.4%	-7.3%	+115.3%	0.27	13 Nov
SILVER ($/oz) Silver — XAG/USD (COMEX)	49.12	-11.6%	-24.4%	-7.4%	+118.2%	0.19	13 Nov
CRUDE OIL Crude oil — WTI ($/bbl)	88.56	-6.9%	+7.5%	+50.9%	+25.0%	-0.30	13 Nov
USD / INR US dollar – Indian rupee	94.24	-0.3%	-1.2%	+6.1%	+24.4%	-0.26	15 Nov

Returns are in each market's own currency. Correlations use days on which both markets traded. Delayed / end-of-day data via this site's server from Yahoo Finance.

Global Markets: normalized 1-year chart, 1M / 3M / 1Y / 5Y returns and 1-year correlation with the Nifty.

5 The Jyotiṣa Reading — Score, Volatility, Why

Prediction & Research Models → Market Trend Model (also on Indian Markets): four instruments, the reading and the reasons.

SCORE	LABEL	CLASSICAL READING
+25 … +100	Bullish	Trend support; dips are buying chances
+8 … +25	Mildly bullish	Selective strength
−8 … +8	Neutral	Range-bound; no layer dominates
−25 … −8	Mildly bearish	Rallies may fade
−100 … −25	Bearish	Contraction signals dominate

VOLATILITY	MEANING
0–39 low	Few turning signals
40–64 moderate	Some stations, yogas, mixed vedha
65–100 high	Clustered stations, eclipses, sign changes — sharp two-way moves

The seven layers (weights)

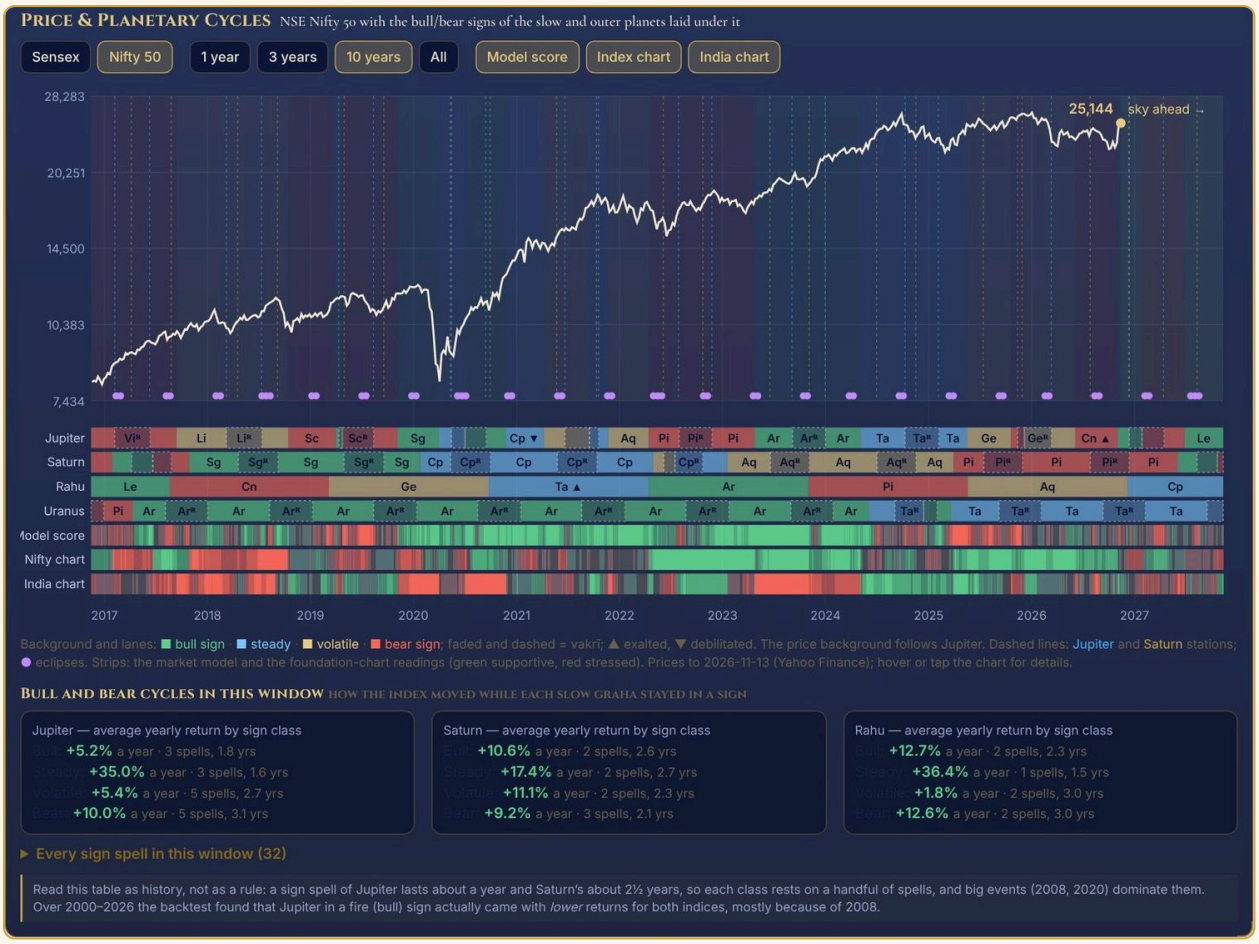

Fast grahas ×0.12 · Slow grahas ×0.28 · Outer planets ×0.10 · Graha yogas ×0.15 · Stations ×0.10 · Sarvatobhadra vedha ×0.12 · Nakshatra nature ×0.13. The score is scaled around the median sky of 1997–2027, so 0 means an *ordinary* sky.

Reading "Why"

- **Slow** Jupiter, Saturn, Rāhu, Ketu → the trend of the year.
- **Station** and eclipses → the timing (± a few days).
- **Fast** Sun, Moon, Mercury, Venus, Mars → the weekly mood.
- **Yoga** conjunctions such as Guru–Ketu or Mars with the nodes → event risk.
- Green lines push the score up, red pull it down; the list is sorted by strength.

Honest record. Over 26 years the composite score did not forecast next-month returns better than chance (rank correlation ≈ 0). Use it for context and timing reviews, not as a trade trigger.

6 Price & Planetary Cycles

Indian Markets → Price & Planetary Cycles: the index with Jupiter, Saturn, Rāhu and Uranus lanes, the model and foundation-chart strips, and the cycle table.

Reading the chart

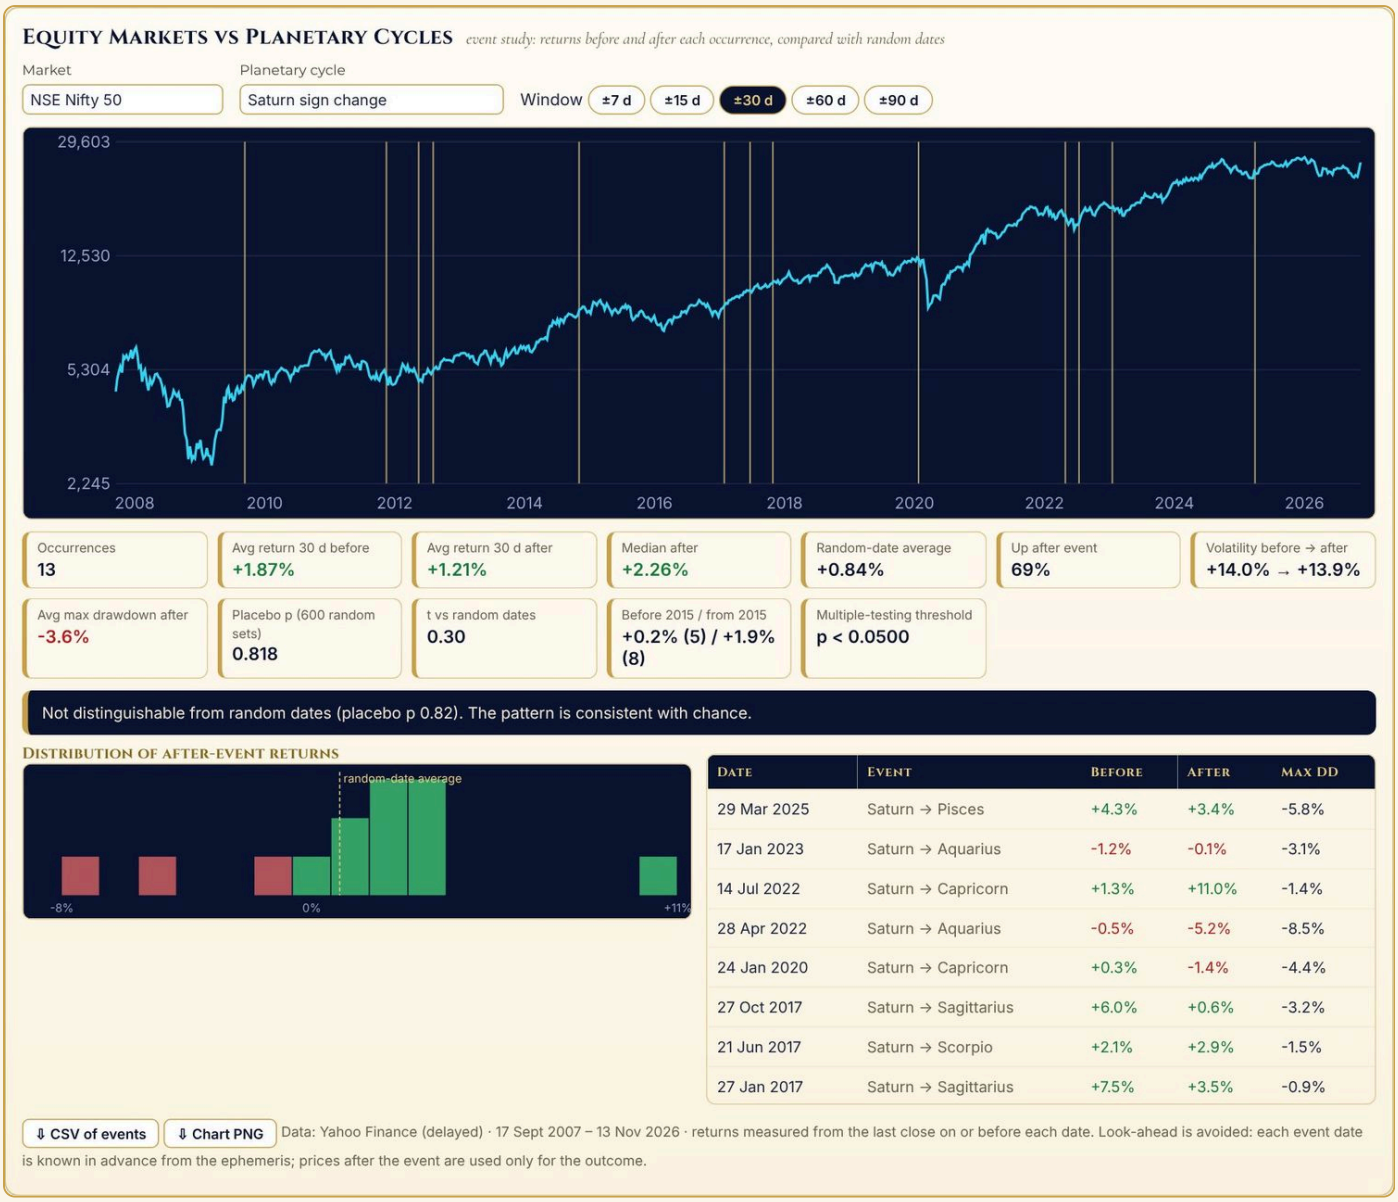

- Choose Sensex or Nifty, and 1 year … All.
- Lanes: **bull**, **steady**, **volatile**, **bear** sign; dashed = vakrī; ▲ exalted, ▼ debilitated.
- Dashed vertical lines = Jupiter and Saturn stations; violet dots = eclipses.
- Shaded area on the right = the sky ahead (12 months).
- Bottom strips: model score, index chart and India chart over time (green supportive, red stressed).

Using it for prediction

1. Find the current spell of each slow graha and when it ends.
2. Read in the cycle table how the index behaved in past spells of the same class.
3. Note the next lane change in the shaded future zone.

> Read the cycle table as **history, not a rule**: a Jupiter spell lasts about a year and Saturn's about 2½ years, so each class rests on a handful of spells and is dominated by big events (2008, 2020).

7 Planetary Cycle Event Studies

Planetary Cycles → Equity Markets vs Planetary Cycles (here: Nifty 50, Saturn sign change, ±30 days).

STATISTIC	WHAT IT TELLS YOU
Occurrences	How many times the event happened in the data — fewer than ~15 means weak evidence
Avg return before / after	Mean % change in the window before and after each event
Median after	Middle result — less affected by one big year
Random-date average	What any day would have given — the baseline to beat
Up after event	Hit rate: share of events followed by a rise
Volatility before → after	Did the market become calmer or more turbulent?
Placebo p	Share of random-date sets that did as well — **below the threshold** = unusual; high = chance
Before / from split year	Does the pattern hold in both halves (in-sample and out-of-sample)?

The Commodity panel does the same for gold and silver with Jupiter and Saturn transits, and adds **return per year by each sign** of Jupiter and of Saturn (with exalted / debilitated marked).

8 Nakshatra and Tithi Analysis

Historical Market Observations by Nakshatra and Tithi *average daily move on days the Moon was in each nakshatra at the close*

Instrument

NSE Nifty 50

Across 4,699 trading days (Sept 2007 – Nov 2026), the average day moved 3.7 bp. The strongest nakshatras were Hasta, Viśākhā, Ārdrā; the weakest Revatī, Aśvinī, P.Bhādrapadā. A permutation test (300 shuffles) of the gap between best and worst gives p = 0.87 for nakshatras and p = 0.60 for tithis — the spread is what chance produces with this many groups.

Nakshatra	Lord	Nature	Days	Avg move (bp)	Up days	Vol (ann.)
Aśvinī	Ketu	Kṣipra	176	-5.4	50%	19.2%
Bharaṇī	Venus	Ugra	172	-2.9	53%	19.6%
Kṛttikā	Sun	Miśra	170	-1.7	53%	22.0%
Rohiṇī	Moon	Dhruva	178	10.3	55%	18.3%
Mṛgaśirā	Mars	Mṛdu	175	2.8	55%	17.3%
Ārdrā	Rahu	Tīkṣṇa	175	15.8	55%	20.0%
Punarvasu	Jupiter	Cara	171	-2.5	53%	20.3%
Puṣya	Saturn	Kṣipra	178	-1.3	56%	20.6%
Āśleṣā	Mercury	Tīkṣṇa	178	3.7	53%	20.2%
Maghā	Ketu	Ugra	176	10.5	55%	17.8%
P.Phalgunī	Venus	Ugra	175	9.8	53%	25.9%
U.Phalgunī	Sun	Dhruva	164	14.5	57%	18.5%
Hasta	Moon	Kṣipra	168	21.1	54%	19.8%
Citrā	Mars	Mṛdu	173	-3.7	49%	18.5%

Tithi	Days	Avg move (bp)	Up days
Śukla Pratipadā	143	2.6	52%
Śukla Dvitīyā	164	6.5	45%
Śukla Tṛtīyā	148	10.2	54%
Śukla Caturthī	150	-6.9	49%
Śukla Pañcamī	163	3.0	47%
Śukla Ṣaṣṭhī	163	2.2	52%
Śukla Saptamī	162	-1.7	54%
Śukla Aṣṭamī	172	5.1	52%
Śukla Navamī	149	4.3	56%
Śukla Daśamī	155	8.8	56%
Śukla Ekādaśī	153	-5.5	53%
Śukla Dvādaśī	150	-2.3	50%
Śukla Trayodaśī	146	-15.5	51%
Śukla Caturdaśī	154	1.3	51%

bp = basis points (0.01%). Moon position at the market close (about 15:30 IST); tithi from the Sun–Moon elongation at the same moment. Yahoo Finance (delayed).

Historical observations: average daily move (basis points), up-days and volatility for each nakshatra and tithi, with a permutation test.

NATURE	CLASSICAL MARKET MEANING
Dhruva (fixed)	Holds levels, steadiness
Cara (movable)	Movement, rotation, changing trend
Ugra (fierce)	Fear, falls
Miśra (mixed)	Mixed tone
Kṣipra (swift)	Quick moves and quick reversals
Mṛdu (soft)	Benign, buying
Tīkṣṇa (sharp)	Breaks, sudden cuts

How to read the tables

- 1 bp = 0.01 %. A row of +21 bp means the average day with the Moon there closed 0.21 % higher.
- Check **Days** — each row has only ~150–180 days.
- The summary box gives the **permutation p**: how often shuffled data produce as big a gap between the best and worst groups. A p of 0.87 means the spread is what chance produces.
- The Moon now panel above the tables gives the current nakshatra, its lord and nature, the next change and the tithi.

9 Sarvatobhadra, Eclipses and Stations

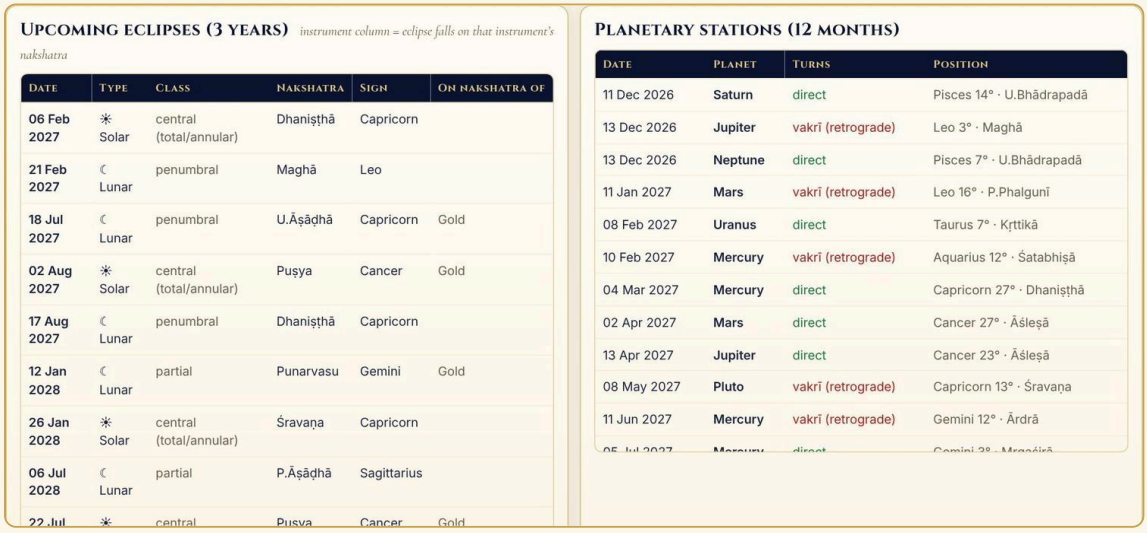

Sarvatobhadra Chakra: the instrument's nakshatras outlined in white; lines show the vedha falling on them.

Teji – Maṇḍī rule (gold, silver)

- **Krūra vedha** (Sun, Mars, Saturn, Rāhu, Ketu) → **teji**: firm prices, scarcity.
- **Saumya vedha** (Jupiter, Venus, Mercury, waxing Moon) → **maṇḍī**: soft prices, abundance.
- Mixed → volatility. For the indices the default is the benefic / malefic reading (change it in Methodology & Settings).

Eclipse & Station Monitor

- Eclipses for 3 years — the last column flags an eclipse falling on an instrument's nakshatra.
- Stations for 12 months — the day a planet turns **vakrī** or **direct**.
- Historical eclipses since 2000 with Sensex / Nifty before and after.
- Use these as the **windows to watch** (± a few days); test them in the lab.

Upcoming eclipses (3 years) — *instrument column = eclipse falls on that instrument's nakshatra*

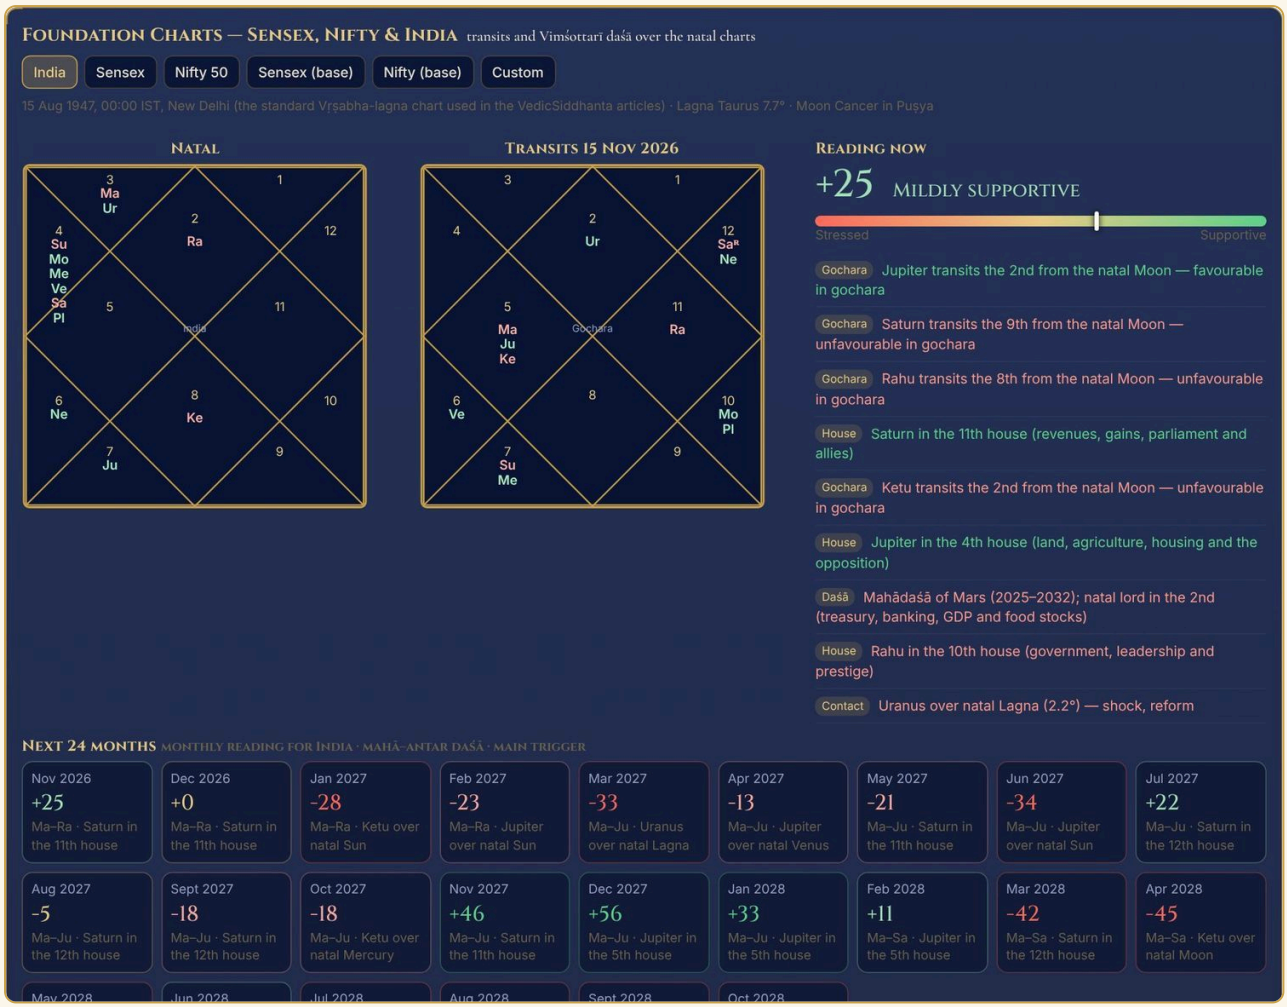

Date	Type	Class	Nakshatra	Sign	On nakshatra of
06 Feb 2027	☀ Solar	central (total/annular)	Dhaniṣṭhā	Capricorn	
21 Feb 2027	☾ Lunar	penumbral	Maghā	Leo	
18 Jul 2027	☾ Lunar	penumbral	U.Āṣāḍhā	Capricorn	Gold
02 Aug 2027	☀ Solar	central (total/annular)	Puṣya	Cancer	Gold
17 Aug 2027	☾ Lunar	penumbral	Dhaniṣṭhā	Capricorn	
12 Jan 2028	☾ Lunar	partial	Punarvasu	Gemini	Gold
26 Jan 2028	☀ Solar	central (total/annular)	Śravaṇa	Capricorn	
06 Jul 2028	☾ Lunar	partial	P.Āṣāḍhā	Sagittarius	
22 Jul	☀	central	Puṣya	Cancer	Gold

Planetary stations (12 months)

Date	Planet	Turns	Position
11 Dec 2026	Saturn	direct	Pisces 14° · U.Bhādrapadā
13 Dec 2026	Jupiter	vakrī (retrograde)	Leo 3° · Maghā
13 Dec 2026	Neptune	direct	Pisces 7° · U.Bhādrapadā
11 Jan 2027	Mars	vakrī (retrograde)	Leo 16° · P.Phalgunī
08 Feb 2027	Uranus	direct	Taurus 7° · Kṛttikā
10 Feb 2027	Mercury	vakrī (retrograde)	Aquarius 12° · Śatabhiṣā
04 Mar 2027	Mercury	direct	Capricorn 27° · Dhaniṣṭhā
02 Apr 2027	Mars	direct	Cancer 27° · Āśleṣā
13 Apr 2027	Jupiter	direct	Cancer 23° · Āśleṣā
08 May 2027	Pluto	vakrī (retrograde)	Capricorn 13° · Śravaṇa
11 Jun 2027	Mercury	vakrī (retrograde)	Gemini 12° · Ārdrā

Upcoming eclipses (3 years) and planetary stations (12 months).

10 India Foundation Charts

India 1947 (15 Aug 1947, 00:00 IST, New Delhi — Vṛṣabha lagna): natal, transits, reading now and the next 24 months.

Charts available

- **India** 15 Aug 1947 — the economy, government, public mood.
- **Sensex** 2 Jan 1986 and **Nifty** 22 Apr 1996 (launch); plus base-date versions and a **Custom** chart.

Reading now (−100 … +100)

Stressed ← → Supportive. Each reason has a tag: Gochara transit from the natal Moon, House transit house, Daśā running period, Contact a transit over a natal point.

Next 24 months

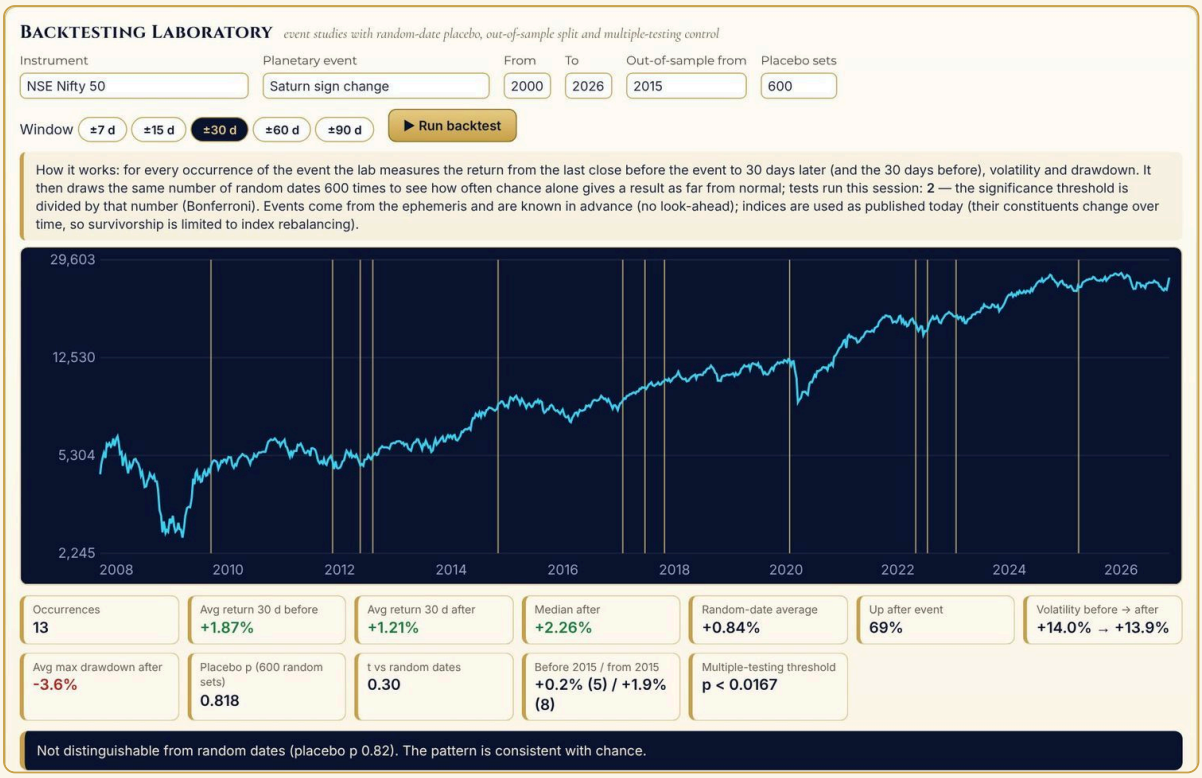

Each box shows the month's score and its main trigger with the mahā–antar daśā (e.g. Ma–Ju). Look for runs of 3 or more red months — stress periods — and green runs.

Economy

The India chart is read with the Sensex and Nifty charts in the "Impact on the Indian economy" panel: houses for treasury and banking (2nd), gains (11th), government (10th) and so on.

> Backtest: the Nifty launch chart's year-ahead reading correlated **+0.24** with the next year's return — promising, not proven.

11 The Backtesting Laboratory

Backtesting Lab: Nifty 50, Saturn sign change, 2000–2026, ±30 days, out-of-sample from 2015, 600 placebo sets.

Running a test

1. Choose the instrument and one of **19 planetary events** (sign changes, stations, eclipses, new / full moon, yogas…).
2. Set the years, the window (±7 … ±90 days) and the out-of-sample year.
3. Choose placebo sets (300–2000) and press ▶ **Run backtest**.

Events are known in advance from the ephemeris, so there is no look-ahead.

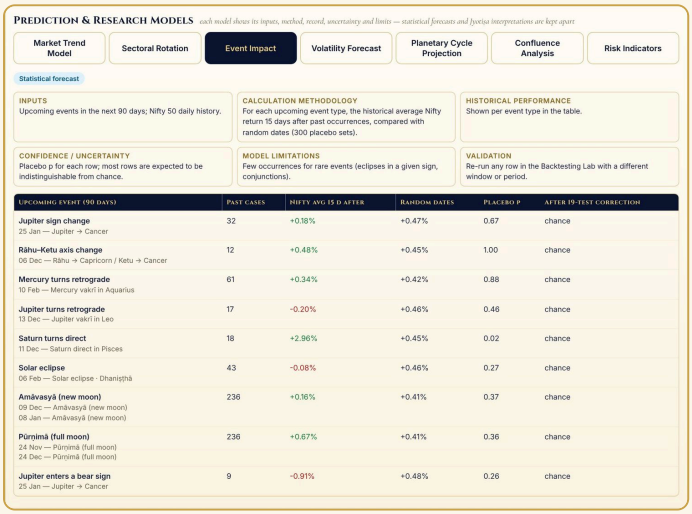

Reading the verdict — checklist

- Placebo p **below** the multiple-testing threshold?
- After-event average clearly above (or below) the random-date average?
- Same sign before and after the split year?
- Enough occurrences (15+)?
- Median agrees with the mean?

The threshold **tightens** as you run more tests in a session (Bonferroni): 0.05 ÷ number of tests. Testing 20 ideas and keeping the best one is how false patterns are born.

12 The Seven Prediction & Research Models

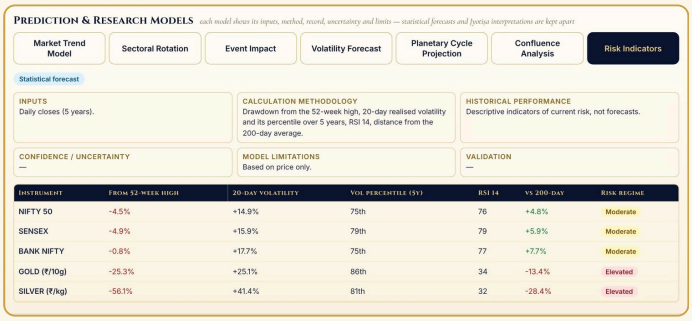

MODEL	TYPE	WHAT IT GIVES	RECORD
Market Trend	Jyotiṣa	Composite score, volatility, layers and reasons (section 5)	No demonstrated skill
Sectoral Rotation	Both	Rotation phase vs Nifty beside kāraka score	Descriptive
Event Impact	Statistical	Events of the next 90 days with past Nifty 15-day response vs random dates	Most rows = chance
Volatility Forecast	Statistical	Next-20-day volatility (EWMA λ 0.94) with an 80 % band	**Works**: forecast vs realised corr. ≈ 0.6–0.7
Planetary Cycle Projection	Jyotiṣa	Weekly, monthly, yearly forecasts and 12-month outlook (section 13)	Classical projection
Confluence	Both	Statistical and Jyotiṣa signals counted separately; “agree / differ”	Not combined
Risk Indicators	Statistical	Fall from 52-week high, 20-day volatility and its percentile, RSI, distance from 200-day average, regime	Descriptive

Event Impact.

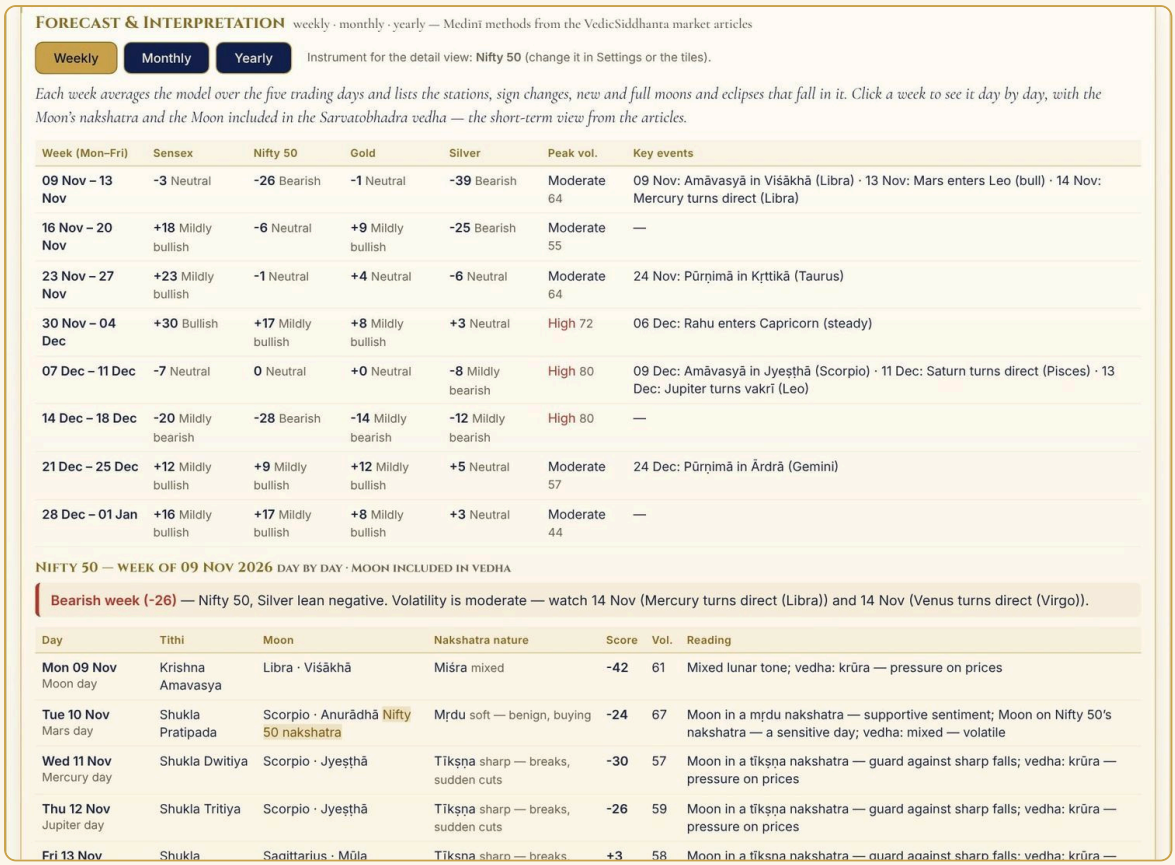

Volatility Forecast.

Risk Indicators.

Every model shows six boxes — Inputs, Calculation methodology, Historical performance, Confidence / uncertainty, Model limitations, Validation. Read them before the numbers.

13 Weekly, Monthly and Yearly Forecasts

FORECAST & INTERPRETATION weekly · monthly · yearly — Mediní methods from the VedicSiddhanta market articles

Weekly | Monthly | Yearly — Instrument for the detail view: Nifty 50 (change it in Settings or the tiles).

Each week averages the model over the five trading days and lists the stations, sign changes, new and full moons and eclipses that fall in it. Click a week to see it day by day, with the Moon's nakshatra and the Moon included in the Sarvatobhadra vedha — the short-term view from the articles.

Week (Mon–Fri)	Sensex	Nifty 50	Gold	Silver	Peak vol.	Key events
09 Nov – 13 Nov	-3 Neutral	-26 Bearish	-1 Neutral	-39 Bearish	Moderate 64	09 Nov: Amāvasyā in Viśākhā (Libra) · 13 Nov: Mars enters Leo (bull) · 14 Nov: Mercury turns direct (Libra)
16 Nov – 20 Nov	+18 Mildly bullish	-6 Neutral	+9 Mildly bullish	-25 Bearish	Moderate 55	—

NIFTY 50 — WEEK OF 09 NOV 2026 DAY BY DAY · MOON INCLUDED IN VEDHA

Bearish week (-26) — Nifty 50, Silver lean negative. Volatility is moderate — watch 14 Nov (Mercury turns direct (Libra)) and 14 Nov (Venus turns direct (Virgo)).

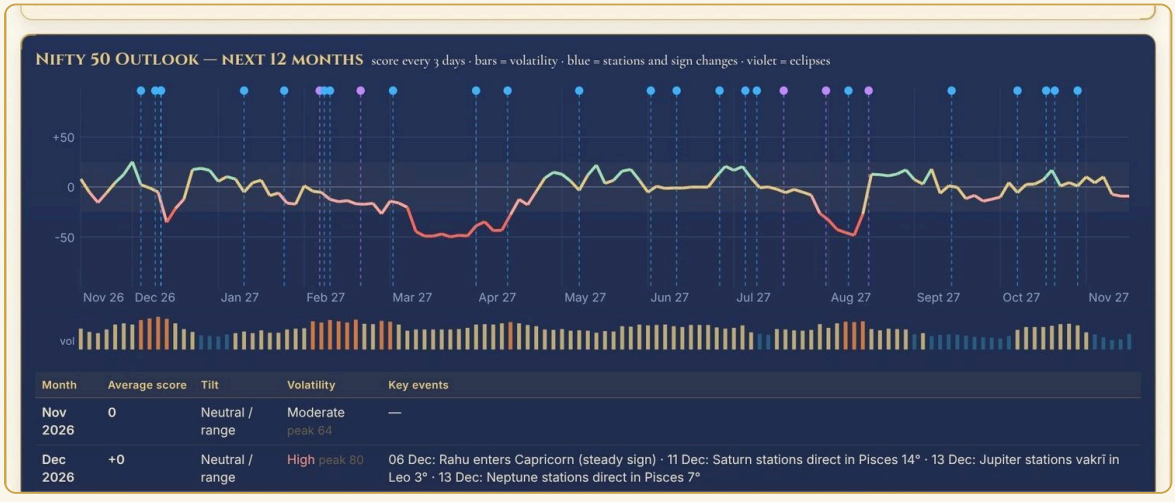

Day	Tithi	Moon	Nakshatra nature	Score	Vol.	Reading
Mon 09 Nov Moon day	Krishna Amavasya	Libra · Viśākhā	Miśra mixed	-42	61	Mixed lunar tone; vedha: krūra — pressure on prices
Tue 10 Nov Mars day	Shukla Pratipada	Scorpio · Anurādhā Nifty 50 nakshatra	Mṛdu soft — benign, buying	-24	67	Moon in a mṛdu nakshatra — supportive sentiment; Moon on Nifty 50's nakshatra — a sensitive day; vedha: mixed — volatile
Wed 11 Nov Mercury day	Shukla Dwitiya	Scorpio · Jyeṣṭhā	Tīkṣṇa sharp — breaks, sudden cuts	-30	57	Moon in a tīkṣṇa nakshatra — guard against sharp falls; vedha: krūra — pressure on prices
Thu 12 Nov Jupiter day	Shukla Tritiya	Scorpio · Jyeṣṭhā	Tīkṣṇa sharp — breaks, sudden cuts	-26	59	Moon in a tīkṣṇa nakshatra — guard against sharp falls; vedha: krūra — pressure on prices
Fri 13 Nov	Shukla	Sagittarius · Mūla	Tīkṣṇa sharp — breaks,	+3	58	Moon in a tīkṣṇa nakshatra — guard against sharp falls; vedha: krūra —

Planetary Cycle Projection → Forecast & Interpretation (Weekly), with one week opened day by day.

VIEW	BUILT FROM
Weekly	Model averaged over the 5 trading days; stations, sign changes, new / full moons and eclipses in the week. Click a week → each day with tithi, Moon nakshatra, nature and Moon vedha.
Monthly	Lunar months (amāvasyā to amāvasyā) and Sūrya saṅkrānti.
Yearly	Saṃvat year lords — rāja (king) and mantrī (minister) — with the year's main transits.

Reading a forecast

- Score and label per instrument, peak volatility for the week.
- **High** volatility weeks with stations or eclipses = turning windows.
- The day view: Moon in a **Mṛdu / Dhruva** nakshatra reads supportive; **Tīkṣṇa / Ugra** reads "guard against sharp falls".

Month	Average score	Tilt	Volatility	Key events
Nov 2026	0	Neutral / range	Moderate peak 64	—
Dec 2026	+0	Neutral / range	High peak 80	06 Dec: Rahu enters Capricorn (steady sign) · 11 Dec: Saturn stations direct in Pisces 14° · 13 Dec: Jupiter stations vakrī in Leo 3° · 13 Dec: Neptune stations direct in Pisces 7°

12-month outlook: score every 3 days, volatility bars, blue = stations and sign changes, violet = eclipses; month table with key events.

14 A Worked Analysis and a Template

Example from the screens of 15 November 2026 — Nifty 50, next four weeks.

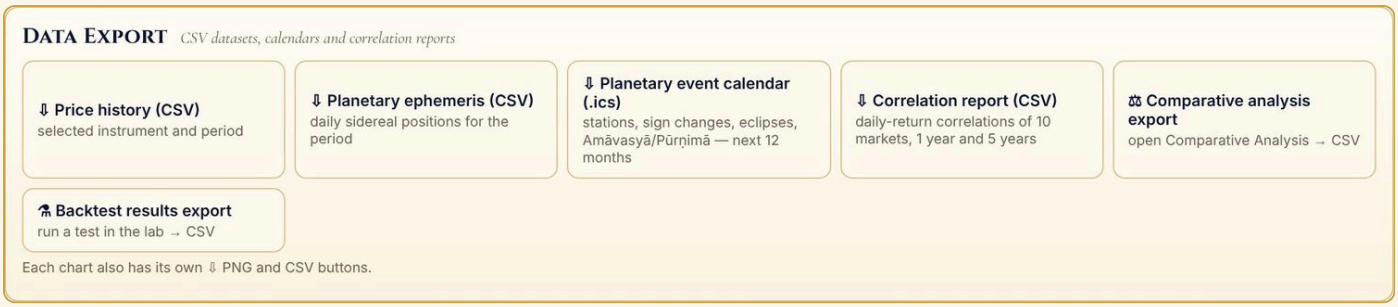

STEP	WHAT THE PAGE SHOWS	INTERPRETATION
1 Tiles	Nifty 25,144 (end of day 13 Nov), −0.44 %; 1 year −2.8 %	Flat year
2 Charts	A sharp November rally lifted price above both the 50- and 200-day averages after months below the 200-day	Recovery inside a sideways year
3 Jyotiṣa reading	+8 Neutral, volatility 51; top reasons Jupiter in Leo (bull sign) vs Saturn in Pisces (bear sign, vakrī)	Range-bound, no layer dominates
4 Cycle	Jupiter in Leo now; Jupiter enters Cancer (bear sign, exalted) 25 Jan 2027	Trend support fades early 2027
5 Foundation	India 1947 reading +25 mildly supportive; 24-month strip turns red Jan–Mar 2027	Stress window in Q1 2027
6 Dates	Rāhu → Capricorn 6 Dec; Saturn direct 11 Dec; Jupiter vakrī 13 Dec; solar eclipse 6 Feb 2027	Week of 30 Nov–4 Dec flagged High volatility (72)
7 Test	Event Impact: Rāhu–Ketu axis change placebo p 1.00; Saturn turns direct p 0.02 but "chance" after 19-test correction	No proven edge
8 Forecast	Volatility model: next 20 days ≈ 10–24 % a year (80 % band); outlook bearish Feb–Apr 2027 (−13, −39, −20)	Expect wider swings, plan reviews

Honest conclusion: a range-bound market with a turbulent window in early December and a classical stress period in February–April 2027. The statistical tests do not support trading these dates; use them to schedule portfolio reviews and to set expectations for volatility.

Glossary

TERM	MEANING
Vakrī	Retrograde
Station	Day a planet turns vakrī or direct
Gochara	Transit, read from the natal Moon
Daśā	Vimśottarī planetary period
Vedha	Piercing of a nakshatra in the Sarvatobhadra Chakra
Teji / maṇḍī	Firm / soft prices
Kāraka	Planet signifying a sector
Placebo p	Share of random-date sets doing as well
Bonferroni	Threshold divided by number of tests
Drawdown	Fall from a previous peak
EWMA	Exponentially weighted volatility
Parity	International price converted to ₹, no duty / GST

Limits and disclaimer. Prices are delayed or end-of-day from an unofficial feed; gold and silver in ₹ are international parity. Planetary positions are computed with approximate theories (accurate to well under a degree for these uses). The classical rules are applied as written in the source articles; the backtests show the composite has not beaten chance on returns, while the volatility model and the Nifty launch chart show some promise. Historical correlations do not establish causation. **This platform is for research and education and does not provide investment advice.**
